CLASS

PATENT NO. CLASS PATENT FAMILY CLASSIFICATION CODES

WO 2001077670 ICM G01N033-48

AB The present invention provides an improved method of assessing/quantifying the amount of homocysteine in a body fluid sample via an enzymic assay which comprises reducing background signal by treatment with one of the following: a reducing agent, a pyruvate deactivating agent, heat treatment, or by lyophilizing or immobilizing the homocysteine converting enzyme.

ST homocysteine assay body fluid

IT Reaction
 (Cycling; homocysteine assay in a body fluid sample)

IT Filters
 (Exclusion; homocysteine assay in a body fluid sample)

IT Enzymes, uses
 RL: ARG (Analytical reagent use); PEP (Physical, engineering or chemical process); ANST (Analytical study); PROC (Process); USES (Uses)
 (Homocysteine converting; homocysteine assay in a body fluid sample)

IT Thiols (organic), biological studies
 RL: BSU (Biological study, unclassified); BIOL (Biological study)
 (dithiols, binding agent; homocysteine assay in a body fluid sample)

IT Immobilization, biochemical
 (enzyme; homocysteine assay in a body fluid sample)

IT Blood
 Body fluid
 Centrifugation
 Concentration (condition)
 Cryoprotectants
 Erythrocyte
 Filters
 Filtration
 Freeze drying
 Heat treatment
 Heating
 Liquids
 Molecular sieves
 Neutralization
 Oxidation
 Reducing agents
 Stabilizing agents
 Standard substances, analytical
 Sulfhydryl group
 Test kits
 (homocysteine assay in a body fluid sample)

IT Enzymes, uses
 Reagents
 RL: ARG (Analytical reagent use); ANST (Analytical study); USES (Uses)
 (homocysteine assay in a body fluid sample)

IT Proteins, general, analysis
 RL: ARU (Analytical role, unclassified); NUU (Other use, unclassified); ANST (Analytical study); USES (Uses)
 (homocysteine assay in a body fluid sample)

IT Thiols (organic), biological studies
 RL: BSU (Biological study, unclassified); RCT (Reactant); BIOL (Biological study); RACT (Reactant or reagent)
 (homocysteine assay in a body fluid sample)

IT Enzymes, uses
 RL: ARG (Analytical reagent use); ANST (Analytical study); USES (Uses)
 (immobilized; homocysteine assay in a body fluid sample)

IT Disulfides
 RL: ARG (Analytical reagent use); ANST (Analytical study); USES (Uses)
 (organic; homocysteine assay in a body fluid sample)

IT 6027-13-0, Homocysteine
 RL: ANT (Analyte); ANST (Analytical study)
 (homocysteine assay in a body fluid sample)

IT 53-84-9, NAD 58-68-4, NADH 74-88-4, Methyl iodide, uses 302-01-2, Hydrazine, uses 541-59-3, Maleimide 3483-12-3, Dithiothreitol 5961-85-3, Triscarboxyethylphosphine 6892-68-8, Dithioerythritol 9001-05-2, Catalase 9001-60-9, Lactate dehydrogenase 9001-96-1, Pyruvate oxidase. 9014-19-1, Pyruvate carboxylase. 9014-20-4, Pyruvate dehydrogenase 9024-41-3, Homocysteine desulfurase 9025-03-0, Acetoacetate decarboxylase

RL: ARG (Analytical reagent use); ANST (Analytical study); USES (Uses)
(homocysteine assay in a body fluid sample)
IT 7722-84-1, Hydrogen peroxide, reactions
RL: ARG (Analytical reagent use); RCT (Reactant); ANST (Analytical study);
RACT (Reactant or reagent); USES (Uses)
(homocysteine assay in a body fluid sample)
IT 462-10-2, Homocystine
RL: ARU (Analytical role, unclassified); ANST (Analytical study)
(homocysteine assay in a body fluid sample)
IT 127-17-3, Pyruvic acid, reactions
RL: RCT (Reactant); RACT (Reactant or reagent)
(homocysteine assay in a body fluid sample)

NOVELTY - An assay for homocysteine involves contacting a biological fluid
sample (1) with a reducing agent (2) and subsequently with homocysteine
desulfurase (3). The sample is contacted with an agent (4) which binds,
oxidizes or depotentiates (2) after being contacted with (3).
DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a
kit for a homocysteine assay comprising
(1) homocysteine desulfurase (3) preferably (i) in lyophilized form;
the lyophilisate being substantially free of thiol-containing
cryo/lyoprotectants or (ii) in aqueous liquid form further containing a
dithiol reducing agent (e.g. DTT (dithiothreitol), DTE (dithioerythrol),
or TCEP (triscarboxyethylphosphine)) and a proteinaceous or
non-proteinaceous stabilizer);
(2) a homocyst(e)ine standard (preferably several standards
containing homocysteine (Hcy) or homocystine at several concentrations);
(3) reducing agent (2) (e.g. DTT, dithioerythiol, TCEP or methyl
iodide); and
(4) an agent (4) which binds, oxidizes or depotentiates (2) e.g. an
organic disulfide or a dithiol binding agent (preferably maleimide);
optionally at least one further reagent capable of converting the
homocysteine conversion product of (3) into a detectable analyte;
preferably a pyruvate deactivating agent e.g. hydrazine, acetoacetate

decarboxylase, pyruvate carboxylase, hydrogen peroxide or pyruvate dehydrogenase; optionally a filter for removing pyruvate i.e. a molecular sieve; or capable of removing red blood cells from blood.

USE - For determining homocysteine levels in patients correlated to risk of cardiovascular disease e.g. coronary heart disease, coronary artery disease, cerebrovascular disease, or peripheral vascular disorders.

Human blood was collected into vacutainer tubes containing citrate. Plasma was separated from the cells upon centrifugation at 1000 g for 10 minutes at 2 - 8 deg. C. Sample (10 micro l) was mixed with 0.47% hydrogen peroxide (10 micro l) and incubated at room temperature for 3 minutes. Enzyme reagent 1 (containing homocysteine desulfurase (0.02 U/ml), lactate dehydrogenase (20.8 micro g/ml), nicotinamide adenine dinucleotide (NADH) (50 micro M), cryo/lyoprotectant (trehalose, gelatine, maltose, dextran, mannitol, tween 20 or caseine) (0.8 wt,%), phosphate buffer (pH 8) (0.1 M), catalase (300 U/ml)) (25 micro l) was added and incubated for 30 minutes at 37 deg. C. 10 micro l of the same sample was mixed with 0.47% hydrogen peroxide and incubated at room temperature for 3 minutes. Blank reagent 1 was added and incubated for 30 minutes at 37 deg. C. Following this incubation reagent 2 was added to each and after mixing they were incubated for further 3 minutes at room temperature. Reagent 2 contained the DTT (dithiothreitol) binding agent and the acid destroyed the excess NADH. A reagent 3 was added and incubated at 37 deg. C for 15 minutes. The reaction was stopped by the addition of 6M HCl (15 micro l) and the sample was read at 550 nm. The reading obtained for the sample treated with blank reagent 1 was subtracted from the reading for the sample treated with enzyme reagent 1. The pretreatment of samples with hydrogen peroxide and the absence of catalase in reagent 1 for one set of samples were used as control.

The samples were assayed in the presence and absence of H₂O₂/catalase. The reduction in background had improved the precision of the assay by decreasing the % CV (coefficient of variance). The results demonstrated that the background was reduced when samples were assayed in the presence of hydrogen peroxide and catalase.

ADVANTAGE - The assay reduces the background levels, i.e. the signal generated by performance of the assay in the absence of the homocysteine conversion enzyme. The improved assay determines the homocysteine levels in patients.
